

# Introducing TempusPRO: Patient-reported outcomes for personalized mental healthcare

**TempusPRO serves as a tool to incorporate measurement-based care into your practice and make it easier to collect patient reported outcomes.** Through the application, patients can complete clinically standard mental health assessment(s) of your choosing, such as the PHQ-9, GAD-7, and many more. You can also customize the cadence that assessments are completed. This information is displayed back to you through the Tempus portal and aggregated over time to help you evaluate each patient, allowing you to build a more personalized and data-driven treatment plan.

## TEMPUSPRO IN YOUR PRACTICE

- > Select assessments for your patient throughout their treatment plan.
- > Scores will be automatically aggregated over time, so you can easily track your patient's progress and medication adherence between appointments.
- > Your patient can also choose to log daily activities like new symptoms, energy level, steps, and more to share at their next appointment.
- > View your patients' assessments in the same portal as their clinical Tempus|nP report.

Through the additional insights generated from TempusPRO,  
**we're one step closer to advancing personalized mental healthcare.**

## FREQUENTLY ASKED QUESTIONS

### **Which patients can use TempusPRO?**

The mobile app is available to patients who are working with select Tempus providers, with the exception of minors. TempusPRO is only available on iOS at this time.

### **How do I enroll my patients in the app?**

The Tempus order form will include a section for TempusPRO enrollment. On this form, you will be prompted to select the appropriate assessment(s) for your patient. Using the patient's phone number and/or email address provided on the order form, Tempus will send a link to download the application via SMS text message or email.

### **How will my patients be notified to complete an assessment?**

Based on the cadence you select, patients will be notified from the app to complete an assessment. From the TempusPRO app, they can also complete daily check-ins to help them track their mood, symptoms, medication adherence, energy levels, and more.

### **How will I see my patient's entries in the application?**

Each completed assessment will be visible in your portal, just like your Tempus|nP test results. Additional information collected through the application (based on your patient's interaction with the application) will also be available in your portal. Scores from their completed assessments will be aggregated over time, so you can easily visualize changes in your patient's reported outcomes.

### **Can I change the assessments for my patient after they start using the app?**

Absolutely! Throughout a patient's course of treatment, different assessments may become more or less applicable to their care plan. You can change the assessments that the patient has access to and the frequency that they are requested for completion directly from your Tempus portal.

### **Will my patients be responsible for any out-of-pocket payment?**

This is your decision, based on your patients' insurance and your clinic's billing practices.

### **How will my patients' data be used?**

Tempus is creating a database of de-identified health information to improve the way mental health is diagnosed and treated. While we may share this data for use in research and the development of new drugs, therapies, and analytical tools, your patients' personal identified health information will never be shared with third parties.
